PROFILE

Fourth-generation Japanese-American from Seattle turned full-stack web developer, drawing on a background in HR, teaching, and cross-cultural communication to create user-centered, inclusive applications. Passionate about UX design and front-end development, seeking collaborative, design-driven teams that value creativity, empathy, and thoughtful product building.

WEB DEVELOPMENT PROJECTS

PureComm – Developer Lead for a full-stack couples' communication platform with real-time chat, daily mood check-ins, grievance tracking, and AI-powered relationship insights. Oversaw system architecture, team workflow, feature implementation, and deployment. Built with Ruby on Rails, PostgreSQL, Stimulus, SCSS, and OpenAI API, deployed on Heroku.

LyricLab – An AI-powered songwriting application that generates custom lyrics from text and images, featuring dynamic filtering and a personalized AI assistant. Built with Ruby on Rails, PostgreSQL, JavaScript, SCSS, and OpenAI API, deployed on Heroku.

Watch-List – A movie discovery and bookmarking web app integrating a third-party movie API to fetch film data, allowing users to search, save favorites, and track watchlists. Built with Ruby on Rails, PostgreSQL, JavaScript, SCSS, and deployed on Heroku.
